

# EFFECTIVE FIELD THEORY FOR STRONGLY-COUPLED HIGGS

Gerhard Buchalla

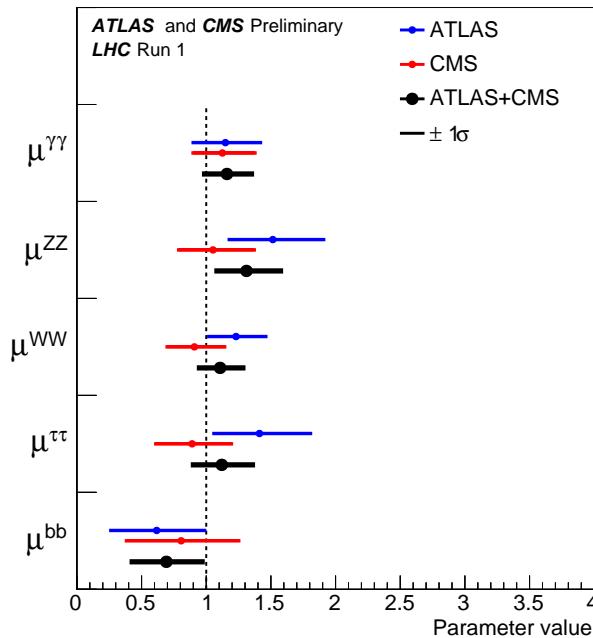

LMU München

EFT - LGT Symposium, TUM – IAS, 19 May 2016

- Anomalous Higgs couplings
- Electroweak chiral Lagrangian
- Systematics and power counting
- Applications

*G.B., Oscar Catà, Alejandro Celis, Claudio Krause*

↔ electroweak symmetry breaking?

SM unnatural,  $m_h \ll \Lambda$ ; no other new particles (so far)

→ Effective Field Theory

- quarks, leptons,  $SU(3)_C$ ,  $SU(2)_L$ ,  $U(1)_Y$

- Goldstones  $\varphi^a$ ,  $U = \exp(2i\varphi^a T^a/v)$

EW chiral Lagrangian

*Appelquist, Longhitano*

- light Higgs  $h$

$$U \rightarrow g_L U g_R^\dagger, \quad h \rightarrow h, \quad g_{L,R} \in SU(2)_{L,R}$$

special case:

$$(\tilde{\Phi}, \Phi) \equiv (v + h)U$$

$$\mathcal{L}_{LO} = -\frac{1}{2}\langle G_{\mu\nu}G^{\mu\nu} \rangle - \frac{1}{2}\langle W_{\mu\nu}W^{\mu\nu} \rangle - \frac{1}{4}B_{\mu\nu}B^{\mu\nu} + \bar{\psi}iD\!\!\!/ \psi$$

$$+\frac{v^2}{4} \langle D_\mu U^\dagger D^\mu U \rangle (1 + F_U(h/v)) + \frac{1}{2}\partial_\mu h \partial^\mu h - V(h)$$

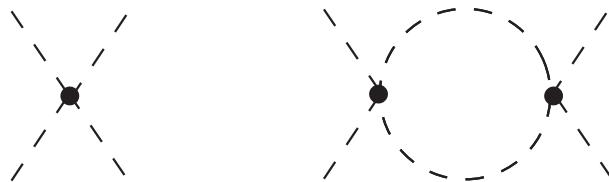

$$-v \left[ \sum_{n=0}^{\infty} \bar{q} \hat{Y}_u^{(n)} U P_+ r \left( \frac{h}{v} \right)^n + \text{h.c.} + \dots \right]$$

- $U = \exp(2i\varphi^a T^a/v)$ ,  $F_U(h/v) = \sum_{n=1}^{\infty} f_n (h/v)^n$ , etc.
- SM:  $f_1 = 2$ ,  $f_2 = 1$ ,  $f_{n>2} = 0$ , etc.
- deviations  $\sim \xi \equiv v^2/f^2$ ;  $\xi \sim 10\%$  still allowed
- $\mathcal{L}_{LO}$  non-renormalizable, NDA cut-off  $\Lambda = 4\pi f$   $\rightarrow$  EW $\chi$ L

# Nonlinear realization of EWSB

Weinberg; Callan, Coleman, Wess, Zumino

- $U = \exp(2i\varphi^a T^a/v)$ :  $SU(2)_L \otimes SU(2)_R \rightarrow SU(2)_V$       nonlinear
- $\frac{v^2}{4} \langle D_\mu U^\dagger D^\mu U \rangle$ : contains all powers of  $\varphi^a$
- nonrenormalizable, nonperturbative  $\rightarrow$  loop expansion
- LO:  $\frac{p^2}{v^2}$        $\leftrightarrow$  NLO:  $\gtrsim \frac{1}{16\pi^2} \frac{p^4}{v^4}$
- relative correction  $p^2/16\pi^2 v^2 \rightarrow$  cut-off  $\Lambda = 4\pi v$
- NLO coefficient  $\gtrsim 1/16\pi^2 = v^2/\Lambda^2$

- **particle content** of SM, mass gap  
gauge bosons and fermions weakly coupled to Higgs dynamics
- **symmetries**: SM gauge symmetries  
conservation of lepton and baryon number  
conservation *at lowest order* of custodial symmetry,  
CP invariance in the Higgs sector, (fermion flavour).
- **power counting** by chiral dimensions  $\Leftrightarrow$  loop expansion

# Loop counting $\equiv$ chiral counting

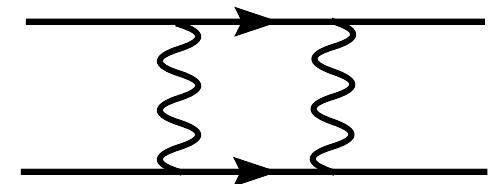

---

Urech; Nyffeler, Schenk; Hirn, Stern; G.B., Catà, Krause

chiral dimensions:  $[A_\mu, \varphi, h]_c = 0, \quad [\partial_\mu, g, y, \psi\bar{\psi}]_c = 1$

loop order:  $2L + 2 = \Sigma$  (chiral dim.)

example:  $4_p - 6_p + 4_g + 2_\psi = 4$

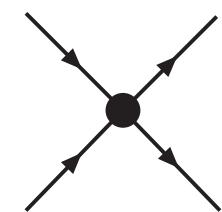

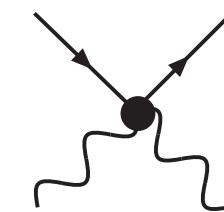

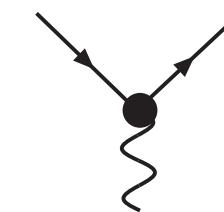

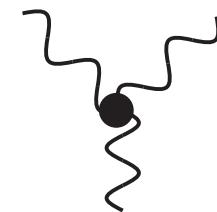

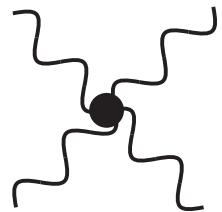

$\Rightarrow [\mathcal{L}_{LO}]_c = 2, \quad [\text{NLO}]_c = 4$  (local terms;  $D^n, n \geq 0$ )

$$UhD^4, \quad g^2X^2Uh, \quad gXUhD^2, \quad y^2\psi^2UhD, \quad y\psi^2UhD^2, \quad y^2\psi^4Uh$$

- $\bar{\psi}\psi\bar{\psi}\psi, X^2Uh$  not LO

→ classification of NLO operators

$$UhD^4, \quad X^2Uh, \quad XUhD^2, \quad \psi^2UhD, \quad \psi^2UhD^2, \quad \psi^4Uh$$

# Loop vs. dimensional counting

---

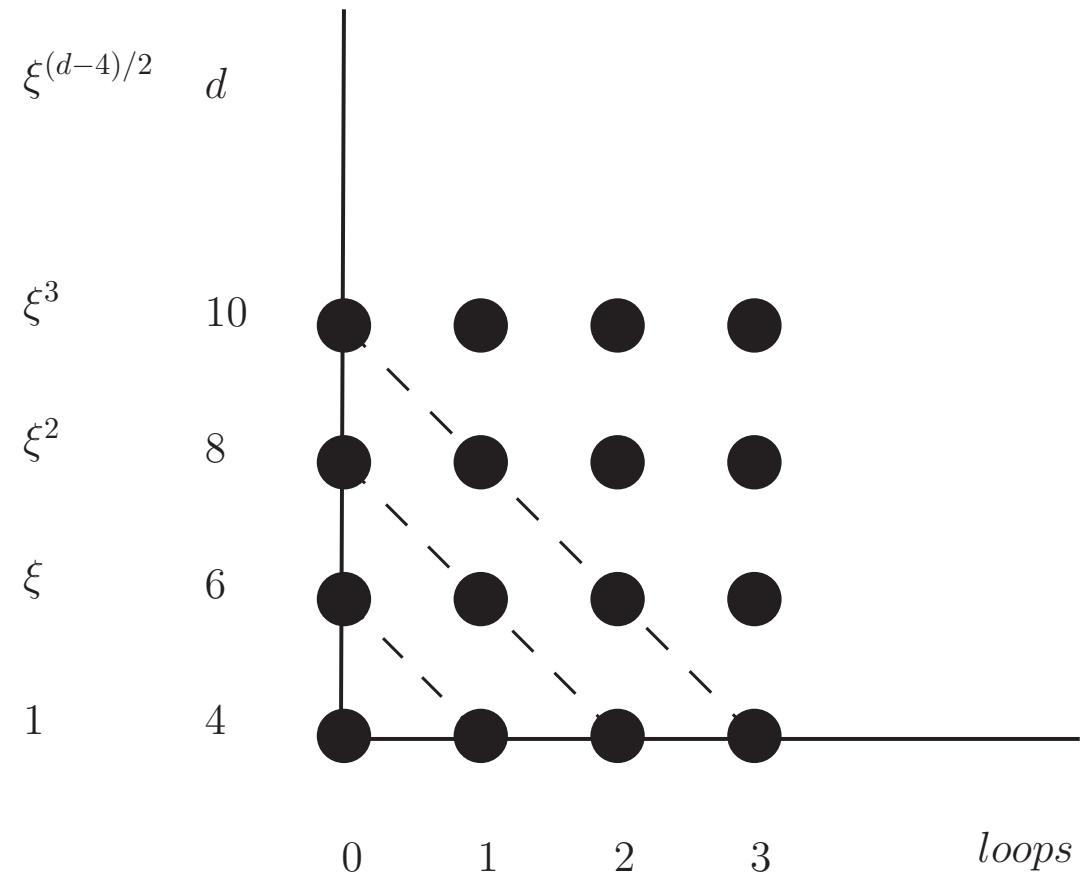

$$\Lambda = 4\pi f$$

$f$

$v$

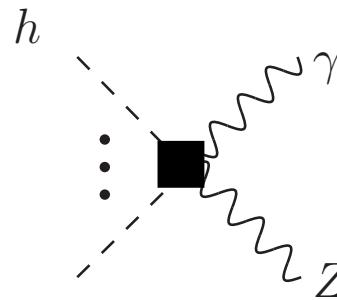

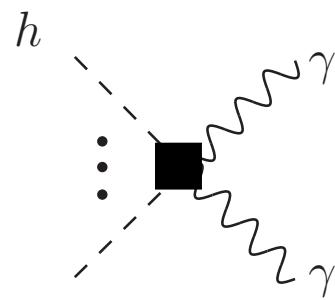

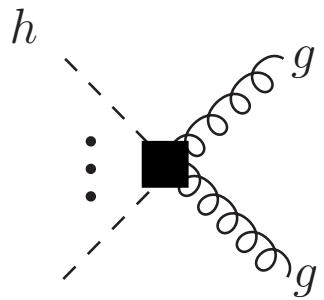

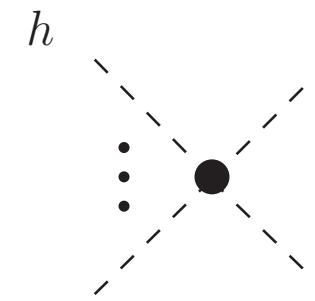

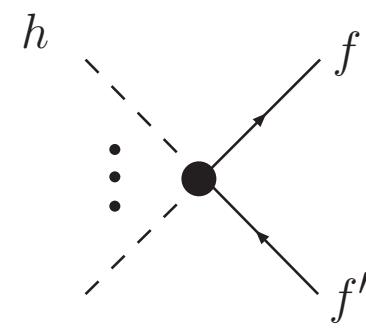

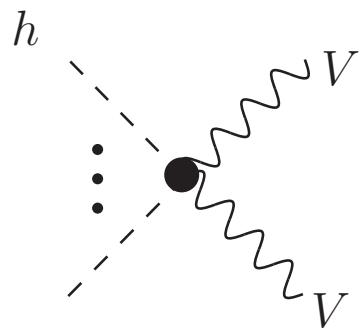

$$\xi = \frac{v^2}{f^2} \rightarrow \text{dim. exp.}$$

$$\frac{1}{16\pi^2} \approx \frac{f^2}{\Lambda^2} \rightarrow \text{loop exp.}$$

# LO couplings

---

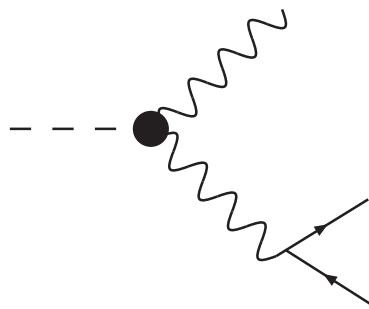

$$\begin{aligned} \mathcal{L} = & 2\textcolor{red}{c_V} \left( m_W^2 W_\mu^+ W^{-\mu} + \frac{1}{2} m_Z^2 Z_\mu Z^\mu \right) \frac{h}{v} - \textcolor{red}{c_t} y_t \bar{t} t h - \textcolor{red}{c_b} y_b \bar{b} b h - \textcolor{red}{c_\tau} y_\tau \bar{\tau} \tau h \\ & + \frac{e^2}{16\pi^2} \textcolor{red}{c_{\gamma\gamma}} F_{\mu\nu} F^{\mu\nu} \frac{h}{v} + \frac{g_s^2}{16\pi^2} \textcolor{red}{c_{gg}} \langle G_{\mu\nu} G^{\mu\nu} \rangle \frac{h}{v} \end{aligned}$$

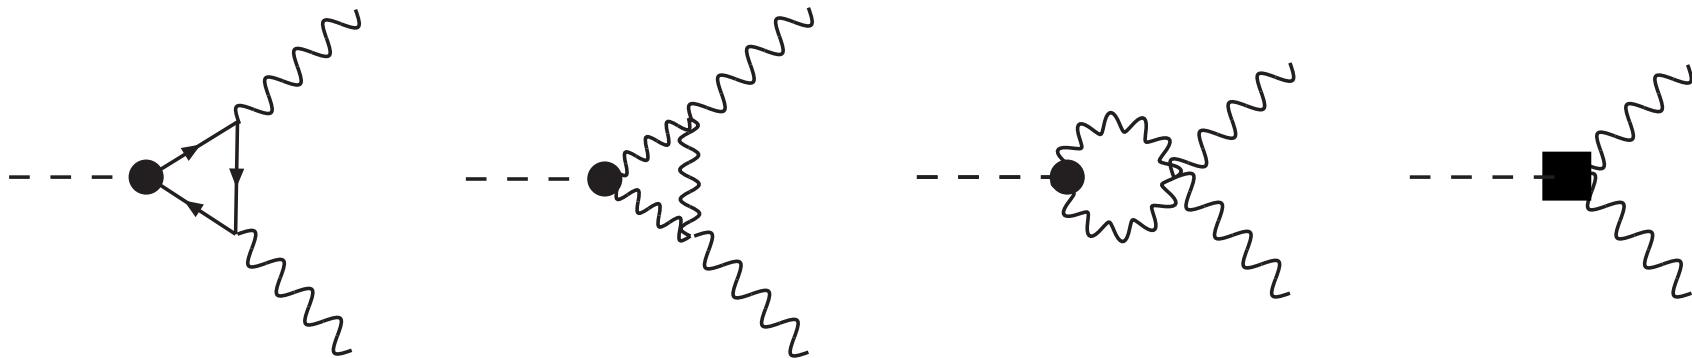

# Sample applications

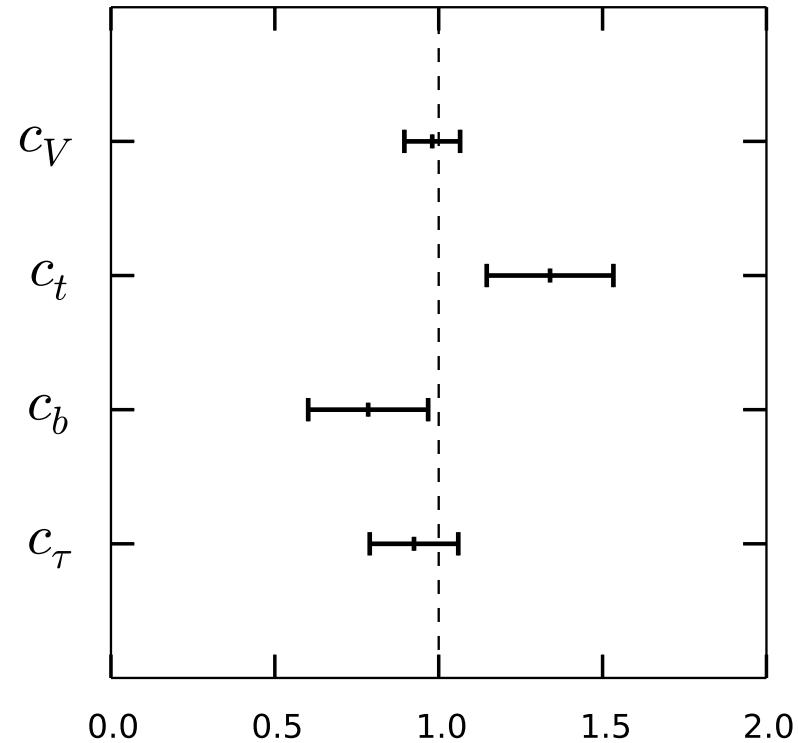

---

$h \rightarrow Z\ell^+\ell^-$

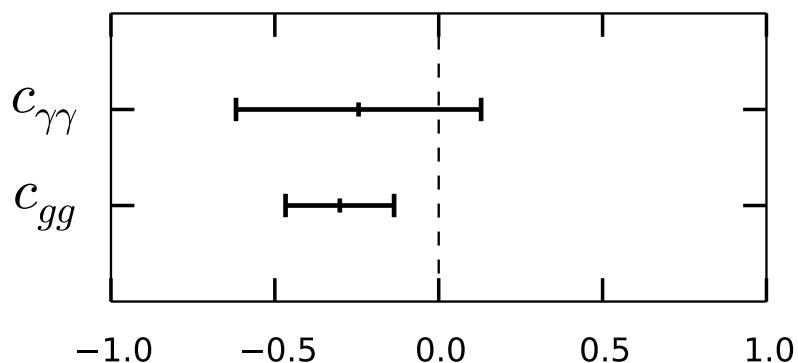

$h \rightarrow \gamma\gamma$

production:  $ggh$ ,  $Wh/Zh$ , VBF,  $t\bar{t}h$

decay:  $h \rightarrow \gamma\gamma$ ,  $WW$ ,  $ZZ$ ,  $b\bar{b}$ ,  $\tau\bar{\tau}$

# Higgs-pair production in gluon fusion

---

*Gröber, Mühlleitner, Spira, Streicher*

- focus on anomalous Higgs couplings
- power counting by chiral dimensions
- consistent EFT, systematic improvement possible
- LO description  $\leftrightarrow$  QFT justification of  $\kappa$ -formalism
- limited number of parameters
- well adapted to LHC precision with  $300 \text{ fb}^{-1}$  (Run 2 and 3)
